

Lumbar stress reduction

Side sleepers: Frequent lumbar (lower back) tensions due to misalignment of the legs.
All experts therefore recommend placing a support between the knees.

Ideal knee support

Thickness and density of this cushion are ideal for alleviating pain caused by rubbing of the knees.

Optimum pelvis alignment

Must properly align the legs to correctly position the pelvis.

Perfect size and fit

A standard pillow is cumbersome without providing the proper support. The studied measurements of the Symbia 03" make it neither too big nor too small; it follows body movement and is easily repositioned.

SPECIFICATIONS

Dimensions

Specifically designed to provide maximum comfort and efficiency.
Width 09" x Length 19" x Height 03"
