

Pleasant relaxation

Reading or watching TV in bed: 80% of population.
Objective: To obtain a stable and comfortable position.

Clear breathing

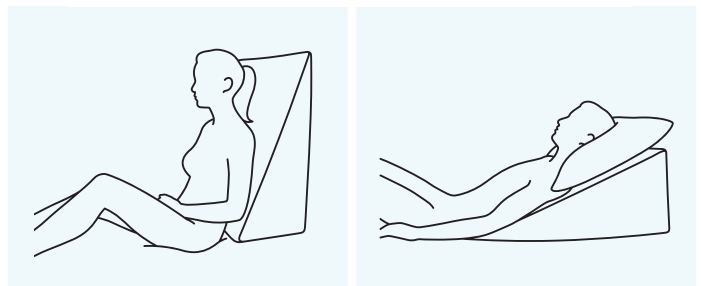

Breathing difficulties: 60% of population.
Respiration: Plays a crucial role in sleep quality.
Position: Directly affects breathing.
For example, when a child is congested, if the upper body is inclined at a studied angle, it clears the airways and eases respiration.

Digestive efficiency

Acid reflux: 40% of population.
Sleeping in a flat position slows digestion and hinders sleep.
Health professionals recommend properly tilting the upper body to improve digestion.

Full back support

Back pain: 80% of population.
Sleeping on a flat mattress causes pain.
Like a beach chair, a specifically calculated position combined with comfortable components reduce tensions on joints and pressure points.

SPECIFICATIONS

Dimensions

Specifically designed to provide maximum comfort and efficiency.
18° = Width 24" x Length 26" x Height 09"
23° = Width 24" x Length 28" x Height 12"
