

Nothing Beats a Quickie®

QUICKIE® MANUAL CHAIRS

The Quickie® GTX™ high-performance, ultra light folding chairs are available in swing-away or fixed-front frame models. Both include a revolutionary frame design to create an extremely low-weight folding chair with the performance characteristics of a rigid chair. The GTX leads the field in style, ride and innovation.

QUICKIE® GTX™

Quickie GTX Ultra Light Manual Folding Wheelchair

Maximum strength, minimum frame, ultimate performance

Innovative Design

As the newest member of the GT family, the Quickie GTX features a popular open-frame design. Both the swing-away and fixed-front design deliver maximum strength with minimum frame, thanks to a revolutionary frame design that creates an **extremely low-weight folding chair** with a rigid-chair feel. There are **no rear side frames** and the X-tube folding assembly is mounted directly to the axle plates. Result: a truly revolutionary chair in terms of weight and performance that rivals titanium models for **superior maneuverability**.

Customizable Options

Compare its weight with any other folding chair in the same class and you'll be impressed. **Ultra-lightweight wheels** create an agile base for the Quickie GTX, at **just 3.1 pounds per chair**, including a quick-release axle feature. The shallow X-tube assembly means it folds into an amazingly compact shape. You'll also appreciate the **fold-down backrest** and an expanded selection of seat widths (12-20 inches in one-inch increments) and depths (12-22 inches in one-inch increments).

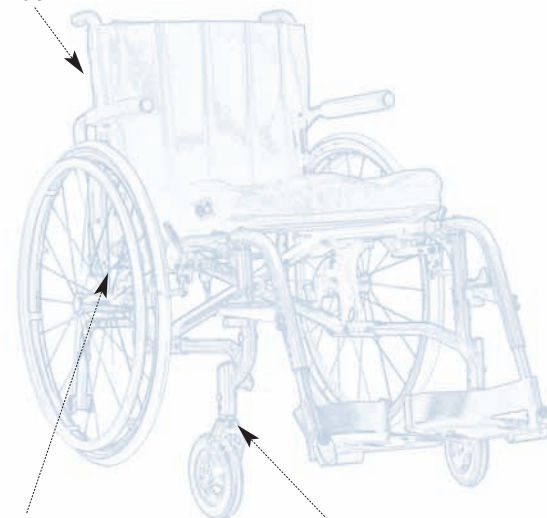

From an aesthetic perspective, the stylish open-frame design lets people see the person, not the chair. For those users who demand low-weight, high-performance, and the convenience of a folding chair with a rigid ride, the Quickie GTX is the one.
