

Otto Bock[®]

QUALITY FOR LIFE

Motus[™]. Function Meets Design.

Product Information

Motus™

Stable on the go, adjustable on the fly, and flexible in between—the Motus™ has it all. To pack so much fun and function into this chair we utilized proven cross brace technology and then pushed it to the next level with an extremely rigid hexagonal crossbar and a seat that snaps into the side frame.

The result is a smooth operator: an energy-saving chair that can easily be folded for transport and storage—and then roll with wherever life takes you.

Motus™

Don't worry—we handled it
Optional handles have a sleek profile, then flip down and lock in place for a sturdy grip.

Rest Easy
Choose from several armrests—from standard tubular to height adjustable.

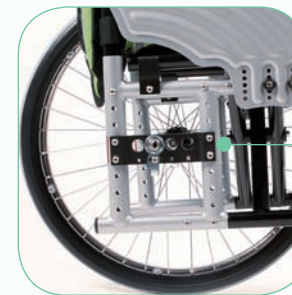

Lock and Load
Knee-Level lock lever is both stiff and easy to operate—and won't rotate around chair frame.

Straight Shooter
Angled front frame allows increased horizontal positioning of caster wheels—and improved forward stability. Caster housing alignment is easily adjusted.

Easy Rider
Optional elevating leg rests have high pivot point, which allows better positioning and extension of the legs. Hexagonal footplate extender eliminates footplate rotation.

Find your center
Our specially designed rear wheel adapters offer 48 different wheel settings and adapt to your unique size and driving style. You can also fine tune your seat angle and height to get perfect positioning.

Be Cool
Optional knit spacer fabric looks and feels good, and lets air circulate to keep you cool.

Improved Cross Brace Technology
Our three-bar cross brace with hexagonal inner cross bar reduces twisting and mimics the stability of a rigid chair.

You can't lose
No need to remove our anti-tippers, which easily swing out of the way by pressing and turning.

Swing Shift
Motus leg rests swing in and out and can be released with one hand. They're so lightweight they even stand up on their own when removed, making them easy to grab after transfers.

Frame Color Options

Candy Red
