

Increased lumbar support

Back pain: 80% of the population.

Causes: Pinched sciatic nerve, herniated disc, back pain etc.

In this case, using a pillow under the knees accomplishes only 20% of the work.

Pelvis retroversion

Ultimate position recognized by the Health community.

Definition: Backward tilting of the pelvis providing stretching and comprehensive support of the lumbar region.

High end aligned under the knees relieves lower back.

Improved blood circulation

Leg pain: Comes from fatigue or blood flow problems: varicose veins, oedema, phlebitis etc.

Solution: Tilt legs without causing hyperextension of the knees.

Low end aligned under the knees relieves leg pain.

Total release

Zero gravity position.

Objective: To raise full lower leg for efficient relaxing position.

SPECIFICATIONS

Dimensions

Specifically designed to provide maximum comfort and efficiency.

Width 20" x Length 22" Height x 05" @ 08°

Comfort layer

1.5" high density memory foam made from soya.

Support structure

High density polyurethane.

Cover (included)

Viscose made from Bamboo, very soft, antibacterial and thermoregulative (maintains stable temperature).
