

Enjoy a secure a ride.

Tsunami's fold-down back locks upright to give you security when riding; it also locks down for easy transport. The locking fold-down back is angle adjustable in 3° increments for your comfort.

Seat adjustment is easy.

Tsunami's optional Mx Towers allow you to achieve a very low rear-seat height with a larger range of adjustment.

Move with ease.

Tsunami's lightweight construction takes a back seat to no one. The Tsunami Ti's transport weight is just 10.8 pounds – the AL is 11.2 pounds.*

The Tsunami is making waves!

The look and feel of a custom welded frame with clean lines and a minimalist feel – Ki Mobility's Tsunami is all that ... and more. To achieve the "Best Fit," Tsunami is completely adjustable – more adjustable than any other chair in its class.

Achieve the best fit.

Tsunami's design allows you to easily change your seat depth for a better fit, for growth, or to accommodate a solid back.

Get better handling and a more responsive ride.

Tsunami's oversized tubing creates an incredibly stiff frame – (15 to 20% stiffer than competitive designs).

Customize your look.

You choose the style and positioning you want with more front-frame bend options. Choose from 90°, 85°, 80°, 75° and 70° bends.

Your footplate adjustment is easy!

Now you have infinite adjustability of the footrest length. Simply loosen, adjust, tighten. It's that easy!

The allure of the Tsunami is the distinctive look. Oversized tubing – slightly larger than other chairs – gives you the feeling of substance. It's solid.

You can count on it.

The front end is distinctive as well. Precision-machined aluminum caster mounts provide a unique visual symmetry that catches the eye, yet are far stronger than welded mounts.

With Tsunami – less is more.

Tsunami's design gives you a responsive ride. And, importantly, this feeling isn't just an aesthetic treatment. The frame is much stiffer, 20% stiffer, and much stronger. This is felt in the responsiveness. It moves when you move and doesn't flex at inopportune times. The Tsunami handles superbly!

With Tsunami – you will feel the difference.

As always, there is the weight – what you push and what it weighs when you need to toss it in the car. Tsunami AL weighs in at 18.8 pounds. You can lighten your Tsunami even more with the Superlight wheel package and lightweight backrest, bringing a fully configured Tsunami AL down to as little as 14.9 pounds – with a transport weight of under 10.8 pounds.

That's less weight for you to push and less weight you need to lift.

A sleek look. A light frame. A stiffer, more responsive ride – it's Tsunami.

Tsunami AL

An incredibly lightweight, rigid, open-frame manual wheelchair.

As light as any aluminum wheelchair in its class, the oversized tubing used in the Tsunami AL provides rigidity usually found in more expensive materials. This rigidity results in an incredibly responsive ride.

With five different front-frame bend options and four tapers, you have the ability to design exactly the frame you want.

With the unique Crescent CG and Tubular Component System, you can adjust your seat depth as needed. Additionally, you have more optional Center of Gravity positions than any other chair on the market.

Fabricated from 6061-T6 aerospace aluminum, the Tsunami AL weighs just 18.8 pounds as standard, with a transport weight of 11.2 pounds.

Lower your chair weight to as low as 14.9 pounds by using our Superlight wheel package and the lightweight backrest.

Available in 14 standard colors and 9 hydrographic patterns.

Tsunami Ti

Everything you get with the Tsunami AL, but lighter and stiffer still!

Made of Ti3AL/2.5V, the Tsunami Ti is .4 pounds lighter and another 20% stiffer than the AL frame.

The scratch-resistant, polished titanium frame takes wheelchair performance to a new level.

The Tsunami has a compact transport profile.

Tsunami

Little Wave

The Tsunami Little Wave is an incredibly lightweight, rigid-frame wheelchair combining the unmatched maneuverability of a high-performance manual wheelchair with easy growth and adjustability.

Weighing in at as little as 16 pounds, the Little Wave takes less effort to push and transport.

The multiple front-frame bend options promote proper leg and foot positioning.

Simple and convenient Center of Gravity adjustments achieve correct wheel position.

An optional 5th wheel provides stability while allowing more aggressive positioning of the rear wheels and midline wheel access.

Standard sizes are available as small as 10" x 10".

Seat Width
14"-20"

Seat Depth
14"-22"

Front Seat Height
14"-23.5"

11.2 lbs.

Standard Weight
18.8 lbs.

Tubing Size
1 3/8"

* Transport weight based upon a 16" x 16" chair. Standard components, without wheels.

The Tsunami Difference ...

Comfort is easy with Tsunami's Crescent CG system

Hidden inside your Tsunami, the simple yet ingenious Crescent CG system keeps the side frame free of excess hardware, while providing infinite adjustability.

Feel secure with Ki

All Ki Mobility wheelchairs have passed the WC-19 standard for wheelchairs and transportation.

Tsunami's Tubular Component System (TCS) customizes your seat height

TCS provides individual seat height settings without the clutter of extra metal and hardware. Seat heights are adjustable up and down in 1/4" increments. This gives you a sleek, clean chair. Also, by using tubular components, we greatly increase the lateral stiffness of the chair.

The logo for Tsunami, featuring the word "tsunami" in a stylized, italicized font with a wave graphic above the "t".

Gotta ride it!
