### MONITOR FAQS

# Q: What is a Calibration Check System?

A: Dual sensors automatically double check each blood pressure reading, providing you with added reassurance that every reading is accurate.

# Q: How does the Cuff Wrap Guide Work?

A: A visual indicator confirms the cuff has been wrapped correctly on your arm. The blood pressure monitor will not continue with a reading until the cuff is wrapped securely.

## Q: What is a ComFit™ Cuff?

A: The pre-formed cuff expands to fit regular and large arms comfortably and easily.

## Q: How do I know what cuff size to choose?

A: It is very important to use the appropriate cuff size to get an accurate reading. To determine the size for you, measure the circumference of your left upper arm around your bicep:

- Standard Cuff fits 9" 13"
- Large Cuff fits 13" 17"
- ComFit<sup>™</sup> Cuff fits 9" 17"
