Manu Immobil
Manu Immobil Long

For occupational or post-operative Treatment

The 50P10 Manu Immobil and 50P11 Manu Immobil Long wrist positioning orthoses has been designed for immobilization of the hand and wrist in a functional position. The 50P11 Manu Immobil Long offers additional fixation of the finger joints. Both orthoses can be used for post-operative and post-traumatic immobilization as well as for occupational therapy.

Use of the special three-dimensional SpaceTex® spacer fabric ensures high comfort for the patient. SpaceTex® is breathable and has excellent padding qualities.

The orthoses are lightweight and – since the pad and straps are washable – offer good hygienic properties.

Manu Immobil 50P10

Manu Immobil Long 50P11

Indications

- After fractures and luxations of the hand, the wrist (applies to 50P10 and 50P11) and of the finger joints (only applies to 50P11)
- After wrist, carpal and metacarpal surgery
- For treatment of acute irritations (such as carpal tunnel syndrome), osteoarthritis of the wrist or severe distorsions (sprains)

The indication must be determined by the physician.

Effects

The hand or wrist and finger joints (only applies to 50P11) are immobilized in a functional position in order to prevent harmful movements.

Features

- Good immobilization in a functional position
- The integrated steel bar offers an individual adjustment in the area of the wrist and metacarpophalangeal joints
- Excellent padding qualities thanks to the three-dimensional SpaceTex® spacer fabric:
  - Air permeability
  - Good adjustability
 - High comfort
- Washable pads and straps
- Lightweight
